

3032 Library Unit Mounting Instructions

Important: Unlike any other items we offer, the 3032 library unit does require an in-home installation. We recommend that the unit be installed by a professional cabinetmaker and not a trucking company (unless they have a qualified installer on staff).

Information to be considered before ordering

- Ⓡ The sizes we list in the pricelist do not include the overhang of the crown molding. You need to add 2 7/8" to either end.
- Ⓡ The shelves need a 1/4" clearance on each side for the adjustable shelf support. This would add 1 1/2" width to a three section unit.
- Ⓡ The unit is photographed with cut outs for the baseboard. We do not make these cut outs unless specified by the customer. The reason being, the shape of baseboards vary from site to site. If you provide a detailed drawing of your baseboard with your purchase order, we will cut out the back of the unit to your specifications at no charge.

Installation instructions

- Ⓡ Remove the screws that are located on each side of the columns. They are set in from the back about 3/8" and run almost the full height of each column.
- Ⓡ Once these screws are removed, you can take out a long 3/4" thick board which is used for mounting column to wall.
